 Image display device e.g. head mounted display has secondary and tertiary
 prisms comprising relay optical system, which bend optical paths away
 from observer
Patent Assignee: OLYMPUS OPTICAL CO LTD (OLYU )

Abstract (Basic): JP 2002090692 A
        NOVELTY - A primary prism with positive power bends the optical
    paths to the side of observers view axis. A secondary prism bends the
    optical paths towards primary prism in direction away from the
    observer. A tertiary prism with positive power bends the optical paths
    away from observer in direction opposite to that of primary prism. The
    secondary and tertiary prism comprise relay optical system.
        USE - Image display device e.g. head mounted display, spectacle
    type display.
        ADVANTAGE - Ensures high performance and a long free working
    distance by the wide-viewing couple, since a small-sized optical system
    is provided.
        DESCRIPTION OF DRAWING(S) - The figure shows a sectional view of
    the optical system of the image display device.
